11. Appendices-----	
12. References-----	

Introduction :

On-the-Job Training (OJT) serves as a vital transition between academic learning and real-world industry practice. It allows students to step outside the classroom and into a professional setting where they can apply their theoretical knowledge to actual tasks and projects. As part of my academic requirements, I embarked on a six-month internship from December 1st to May 31st at *Aarya Technology*, located in the Shaha & Nahar Industrial Area. My primary role during this period was centered around *WordPress development*, a key area in modern web design and content management.

During this internship, I had the opportunity to work on the company's official website — www.aaryatechnology.in — which involved building and maintaining six major pages, ensuring responsive design, and optimizing performance for user engagement. My responsibilities included theme customization, plugin integration, SEO optimization, and content placement. I regularly collaborated with team members to align the website's layout with the company's branding and technical requirements. This hands-on experience deepened my understanding of front-end development tools and WordPress architecture, while also helping me become proficient in using page builders, version control systems, and staging environments.

Beyond the technical aspects, the OJT program significantly contributed to my *professional development*. Working in a live environment taught me how to manage real deadlines, understand client requirements, and maintain quality standards under pressure. I developed time management skills by balancing multiple tasks and adhering to project timelines. The dynamic nature of the work helped me become more adaptable and solution-oriented, especially when troubleshooting errors or resolving layout issues in WordPress. These experiences honed my analytical thinking and improved my ability to work independently as well as part of a team.

The collaborative atmosphere at Aarya Technology gave me valuable exposure to *teamwork and communication*. Daily stand-up meetings and brainstorming sessions allowed me to express my ideas, listen to feedback, and engage with fellow developers and project managers. I learned how to document processes clearly, write professional emails, and communicate progress updates effectively — all of which are essential soft skills in any workplace. These interactions not only enhanced my technical vocabulary but also helped me build confidence in presenting my thoughts during team discussions.

Another crucial learning curve was *problem-solving*, where I encountered several practical challenges that could not be solved by textbook knowledge alone. Whether it was debugging a plugin conflict, improving page load speed, or ensuring cross-browser compatibility, each problem required a logical approach and persistence. By experimenting, seeking guidance, and referring to online resources, I gradually developed the ability to diagnose and resolve issues more efficiently. This experiential learning process reinforced my capability to think critically and make informed decisions under pressure.

In conclusion, my OJT experience at Aarya Technology was a transformative phase in my career development as a web developer. It allowed me to apply academic learning in real-world scenarios, develop a range of technical and interpersonal skills, and understand the work ethic expected in a professional environment. This journey helped me identify my strengths, overcome weaknesses, and gain clarity on my career path in the web development field. I am confident that the skills and experiences I gained during this training will serve as a strong foundation for my future endeavors in the tech industry.

Company Overview :

Aarya Technology is a fast-growing IT and Security Solutions company that delivers a wide range of comprehensive services across multiple technological domains. As part of the larger *Saha & Nahar Industry* group, Aarya Technology has established a solid reputation in fields such as ERP software development, networking, cybersecurity, web and mobile application development, and infrastructure solutions. The company aims to provide end-to-end digital transformation services to businesses of all sizes, helping them adapt to the demands of a rapidly evolving digital landscape. With its consistent focus on innovation and efficiency, Aarya Technology is steadily becoming a trusted name in the IT sector.

What sets Aarya Technology apart is its *customer-centric approach*, where understanding client needs and delivering tailored solutions is a top priority. The company emphasizes high-quality outputs, whether it's developing enterprise-level software or integrating advanced security systems. The working culture is both dynamic and collaborative, fostering creativity and encouraging knowledge sharing. The team is composed of highly skilled professionals, including software developers, project managers, designers, network engineers, and cybersecurity specialists. Together, they bring diverse expertise to the table, enabling the organization to handle complex, multi-disciplinary projects with precision and effectiveness.

Aarya Technology offers a wide array of services that cater to businesses across different sectors. Its key services include **Custom Software Development**, where unique software solutions are built to match specific client workflows; **Web and Mobile App Development**, aimed at enhancing user experience across platforms; and **WordPress and CMS-Based Solutions**, which involve building responsive and dynamic websites with user-friendly interfaces. The company

also specializes in **IT Infrastructure & Networking**, ensuring seamless connectivity and performance, as well as **Security Systems Integration**, which includes surveillance systems and biometric solutions. Additionally, the organization delivers **ERP Solutions for SMEs and Enterprises**, streamlining business operations through automation and data centralization.

During my internship at Aarya Technology, I was placed in the **Web Development Team**, where I was primarily engaged in WordPress development and customization. My tasks included designing and modifying themes, configuring essential plugins, ensuring mobile responsiveness, and improving website performance. I worked on various client projects, applying best practices in UI/UX design, SEO optimization, and site maintenance. This role allowed me to gain hands-on experience with industry tools and workflows, while also strengthening my problem-solving abilities and teamwork skills. Being part of this professional environment greatly enriched my understanding of how web development projects are managed and delivered in real-world settings.

Training Objectives :

The objectives I set out at the beginning of my OJT were as follows:

Academic Objectives:

- **Apply theoretical knowledge of web technologies in practical settings.**
I aimed to apply my classroom knowledge of HTML, CSS, JavaScript, and MySQL to real-time projects. This helped me understand how these technologies work together in actual web development scenarios.
- **Gain understanding of project life cycles and development processes.**
I wanted to observe and learn each phase of a web development project, from planning to deployment. This included understanding workflows, team roles, and client interactions.

Professional Objectives:

- **Understand the day-to-day responsibilities of a WordPress Developer.**
I wanted to observe and learn each phase of a web development project, from planning to deployment. This included understanding workflows, team roles, and client interactions.
- **Learn to manage deadlines, coordinate with teams, and communicate effectively.**
I aimed to improve my ability to meet project timelines while collaborating with team members. I also focused on building clear, professional communication skills for daily interactions.

- **Master WordPress tools, plugins, and theming from a developer's perspective.**

My goal was to become skilled in using WordPress tools like Elementor and various plugins. I also wanted to understand the logic behind theme structures and customization.

Personal Growth Objectives:

- **Improve confidence in a corporate setting.**

I aimed to become more comfortable expressing ideas and participating in discussions. Exposure to real-world tasks helped me develop self-assurance in a professional environment.

- **Learn time management and multitasking.**

I wanted to balance multiple tasks such as coding, testing, and reporting efficiently. Managing these helped improve my productivity and work quality under pressure.

- **Gain adaptability and decision-making skills.**

I planned to learn how to respond quickly to challenges and make smart, independent choices. This included solving unexpected issues and adapting to new tools or project changes.

Training Experience :

My daily routine during the internship was structured yet flexible, giving me the opportunity to learn independently while being part of a supportive team.

Key Responsibilities:

- Website development using WordPress.
- Theme customization using Elementor and WPBakery.
- Integration of plugins (Yoast SEO, Contact Form 7, WooCommerce, etc.).
- Website performance optimization (caching, image compression).
- Bug fixing and debugging with browser dev tools.
- Participation in client meetings and requirement discussions.
- Collaborating via GitHub and task management via Trello.

Projects I Contributed To:

1. Company Website Revamp – Redesigned homepage and added custom sections.
2. Real Estate Portal – Built property listing functionality using a plugin and custom PHP code.
3. E-commerce Setup for Local Brand – Integrated WooCommerce with custom payment options.
4. Landing Pages – Developed responsive landing pages for marketing campaigns.

Each project followed a complete life cycle—from design and development to deployment and feedback iteration—allowing me to witness and contribute to every phase.

Skills Developed :

The OJT experience helped me enhance a variety of skills:

Technical Skills:

- WordPress installation, configuration, and management.
- Theme development and customization.
- HTML5, CSS3, basic PHP and JavaScript.
- Responsive design techniques.
- SEO practices and tools.
- Plugin development (introductory level).
- Basic understanding of server environments.

Software/Tools Used:

- WordPress CMS
- Elementor & WPBakery Page Builder
- VS Code for code editing
- Git & GitHub for version control
- Trello for task tracking
- Google PageSpeed Insights, GTmetrix for performance testing
- cPanel for domain/hosting management

Soft Skills:

- Communication and presentation skills.
- Client interaction and requirement gathering.
- Time management under pressure.
- Team collaboration and knowledge sharing.
- Adaptability in handling multiple tasks.

Achievements & Contributions :

During my OJT, I achieved the following:

- Delivered 2 complete client websites under the supervision of a senior developer.
- Received positive client feedback for one of the landing pages I built.
- Created documentation for recurring tasks to help onboard new interns.
- Automated some repetitive tasks using scripts.
- Learned to independently troubleshoot bugs and plugin conflicts.
- These accomplishments boosted my confidence and helped me build a strong foundation as a WordPress Developer.

Challenges Faced :

No real growth comes without challenges, and my internship journey was no different.

Common Challenges:

- Initial difficulty in understanding complex plugin conflicts.
- Balancing speed with quality when facing tight deadlines.
- Learning to work with limited client briefs and unclear requirements.
- Overcoming imposter syndrome in a professional environment.

How I Overcame Them:

- Constant learning via YouTube, forums, and documentation.
- Seeking mentorship from team leaders.
- Peer discussions and collaborative troubleshooting.
- Keeping a personal log of issues and how I resolved them.

Lessons Learned :

Some of the Most Important Lessons I Learned Include:

1. **Real-world projects are more about solving problems than just writing code:**

During my internship, I realized that while technical knowledge is essential, the true value lies in identifying, understanding, and solving real-world challenges. Writing code is only one part of the process — thinking critically and applying logic to overcome project-specific issues is what makes a developer effective.

2. **Team communication can be as important as technical skills:**

I learned that working in a team requires more than just technical expertise; clear and consistent communication is key to project success. Whether it's daily stand-ups, status updates, or collaborative debugging, being able to communicate effectively ensures better coordination and fewer misunderstandings.

3. **Being proactive and asking the right questions can speed up learning:**

Instead of waiting for instructions, I discovered the importance of taking initiative — trying out solutions, exploring documentation, and seeking help when stuck. Asking thoughtful questions not only clarified my doubts but also showed my willingness to learn and improve.

4. **Mistakes are a part of the learning process and should be embraced:**

Making errors during development, whether small bugs or bigger missteps, was part of my journey. I learned that mistakes aren't setbacks but opportunities to grow — each error taught me something new and helped build resilience and problem-solving skills.

5. **Understanding user perspective is crucial in front-end development:**

I came to understand that building a visually appealing site isn't enough — it must also be user-friendly, responsive, and intuitive. Thinking from the end-user's point of view helped me make better design and layout choices that enhanced overall user experience.

Recommendations :

Based on my experience, I would suggest:

For the Organization:

- Conduct beginner workshops for interns on the first week.
- Assign a mentor for smoother onboarding.
- Share documentation of past projects with interns.

For Future Interns:

- Start learning WordPress basics beforehand.
- Practice code daily and contribute to dummy projects.
- Ask questions freely and participate in discussions.
- Keep a project journal—record every challenge and solution.

Conclusion :

My On-the-Job Training experience at Aarya Technology was not just an internship—it was a journey of transformation. From learning new technologies and tools to understanding team dynamics and professional ethics, every day brought something new.

The exposure to live projects, mentorship, and problem-solving exercises added tremendous value to my skills and confidence. I now feel better prepared to transition into a full-time role in the tech industry and am grateful for the opportunity to grow within a supportive and innovative environment.

Appendices :

Appendix A: Screenshots of Projects

Appendix B: Weekly Project Activity Log

Duration: 6 Months

Role: WordPress Developer

Company: Aarya Technology

Location: Shaha & Nahar Industrial Area

Week	Duration	Tasks Completed
Week 1	Dec 1 – Dec 7	Project planning, domain setup, WordPress installation
Week 2	Dec 8 – Dec 14	Theme selection, plugin research, homepage layout design
Week 3	Dec 15 – Dec 21	Created About Us, Services pages; installed contact form
Week 4	Dec 22 – Dec 28	SEO plugin setup, responsive design adjustments
Week 5	Jan 1 – Jan 7	Created Blog section, uploaded initial posts
Week 6	Jan 8 – Jan 14	Integrated Google Maps, added testimonial section
Week 7	Jan 15 – Jan 21	Performed SEO audit, installed caching plugin
Week 8	Jan 22 – Jan 31	Reviewed UI/UX, optimized for mobile
Week 9	Feb 1 – Feb 14	Contact form integration with email notifications
Week 10	Feb 15 – Feb 28	Final content updates, added favicon and logos
Week 11	Mar 1 – Mar 15	Testing across browsers, accessibility checks
Week 12	Mar 16 – Mar 31	Hosting backup setup, SSL configuration
Week 13	Apr 1 – Apr 15	Final audit, minor bug fixes

Week	Duration	Tasks Completed
Week 14	Apr 16 – Apr 30	Presentation preparation, documentation finalization
Week 15	May 1 – May 15	Final review with client
Week 16	May 16 – May 31	Deployment handover and project closure

Appendix C: Plugin & Theme List Used

Theme Used:

- Astra (Lightweight and responsive theme)

Plugins Used:

1. Elementor – Page builder
2. Yoast SEO – Search Engine Optimization
3. WPForms – Contact form creation
4. LiteSpeed Cache – Performance and caching
5. UpdraftPlus – Backup and restore
6. Google Site Kit – Analytics and Search Console
7. Smush – Image optimization
8. Jetpack – Site security and performance enhancements
